

MECHANICAL TRANSPLANTER CO.

Model 6000 High Speed Metering Transplanter for Cell Type Plants

QUICK CHANGE TIMING feature is standard on the 4000 and 6000. Just turn the bolts to loosen the top and advance the timing for faster planting speeds.

Model 6000 shown with optional cushion seat, & 4 tray carousel.

Reg. U.S. Pat. Off.

The Model 6000 has the same deluxe features as our popular Model 4000 Metering Unit. It is 30% larger to handle taller, leafier plants like tobacco and cabbage. Or patented kicker arm and shoe design gives uniform control of plant placement. The one person operation to feed the proven four cup metering top design means big savings on labor. Planting speeds of 3000 to 5000 plants per hour have been recorded. Our patented Float Wheel Direct Drive System provides accurate spacings, firms and smooths soft soil conditions and allows the unit to float independently. This helps maintain uniform depth control and accurate cell placement in all types of field conditions. The drive system also enables you to change to a full range of spacings in seconds. The Model 6000 is a proven winner. It's fast, efficient, and easy to use.

Complete Model 800 2 6000 planting tobacco in Kentucky.

Complete Model 6000 2-row with fertilizer

Options shown on above models include: cushion seats, carousel tray holders, fertilizer hopper, 4 x 7 toolbar and deluxe crank type gauge wheels
